EDUCATION

Faculty of Engineering, Mansoura University

Bachelor of Engineering, Cumulative Grade: 94%

Mansoura, Egypt

Sept. 2021 – July 2026

- Courses: Databases, Operating Systems, OOP, Data Structures, Distributed Systems

EXPERIENCE

Sourcya | *Software Engineer* | *Remote*

Sep. 2025 – Present

- Built an external IoT microservice that receives hexadecimal device traffic, decodes raw packets into human-readable data, handles overlapping traffic scenarios, and transforms payloads into structured events
- Designed an event-driven RabbitMQ pipeline to decouple traffic processing from persistence, enabling downstream services to store and cache processed IoT data efficiently
- Solved N+1 query issues, profiled slow SQL queries, and optimized database indexes, delivering major API response-time improvements and reducing database contention

Lesoll | *Backend Developer* | Full-time Onsite | Cairo, Egypt

Jan. 2024 – Jul. 2024

- Delivered a secure authentication system using JWT, enabling persistent sessions and safer token rotation
- Built an autosave drafts feature to reduce content loss and improve editor reliability under unstable connectivity
- Introduced an image caching layer that reduced response latency by approximately 30% and lowered server load during peak traffic

GoFr | *Open Source Contributor*

Remote

- Implemented gRPC server-side rate limiting with interceptors, token-bucket limiting, per-IP/global modes, retry metadata, logging, metrics, and tests [PR #3042](#)
- Fixed a framework-level HTTP method issue, improving API correctness across dependent services [PR #2440](#)
- Refactored HTTP test suites for clearer structure and improved long-term maintainability

AncientBeast | *Open Source Code Contributor*

Remote

- Assisted in migrating a legacy JavaScript game codebase to TypeScript, improving scalability and developer velocity [PR #2733](#)
- Resolved multiple type inconsistencies, increasing build stability and reducing runtime-edge failures [PR #2726](#)

SKILLS

Languages: JavaScript, TypeScript, Java, Go, C++, SQL

Backend & Tools: Node.js, Express.js, NestJS, Spring Boot, Redis, BullMQ, RabbitMQ, Docker/Compose, Git, Linux

Core: OOP, Design Patterns, Databases, Problem Solving

ACHIEVEMENTS

Egyptian Collegiate Programming Contest (ECPC) | *Contestant*

2023, 2025

- Ranked 7th among teams on Day 4 of the qualifications, demonstrating strong algorithmic problem-solving
- Ranked 63rd among 300+ teams in ECPC 2025 qualifications across Egypt, placing in the top 20%

PROJECTS

Gedis | *Redis-Compatible In-Memory Database, Go*

[Server](#) | [Client](#)

- Built a Redis-inspired in-memory database in Go with support for the RESP protocol
- Supported core Redis data structures including Strings, Lists, Hashes, and TTL-based expiration
- Supported AOF persistence, atomic thread-safe operations, and graceful shutdown

Agora | *Reddit-Like Backend API, NestJS, PostgreSQL, Docker*

- Built a modular NestJS backend with TypeORM, PostgreSQL, repositories, entities, and DTO-based validation
- Implemented Communities end-to-end with admin, moderator, and public APIs, service-layer separation, membership, and role-based authorization
- Integrated Cloudinary-backed media uploads, database seeding, text indexing, CI/CD deployment pipelines, and internationalization support
